Added electric shock protection

Our Electrical Hazard boots are non-conductive to help protect the wearer from hazardous step potential. This is the difference in electrical potential between the feet while standing on the ground. These Steel Blue boots are clearly marked and have a distinct yellow colour plug in the rubber sole. This footwear is not suitable where anti-static properties are needed.

Please note: Electrical Hazard (EH) footwear should only be used along with primary protective equipment in areas where there is a need to reduce the risk of electric shock. EH safety shoes should never be used as the primary source of protection in an electrical hazard environment. Other methods such as maintaining appropriate distances, use of isolation methods and use of grounding methods for step voltage control should be considered to provide additional protection. For more information, visit steelblue.com.

When you're good at your craft, you guarantee the quality of your work. Steel Blue takes the same approach with our 30-day, 100% Comfort Guarantee on all boots. If you're not happy with your boots, simply return them to your store of purchase and we'll replace or refund them in accordance with our policies.
